## 1 Overview of valve bank type BVH

A valve bank combines different valves for operating independent consumers.

The valve bank type BVH comprises several directional seated valves that are connected in parallel. As cone valves the directional seated valves have zero leakage in the closed state. The valve sections are connected using banjo bolts. 2/2, 3/2, 4/2 and 4/3-way directional seated valves are available.

Depending on the functional requirement, pressure reducing valves, pressure switches, check valves, restrictors or restrictor check valves are integrated into the valve section.

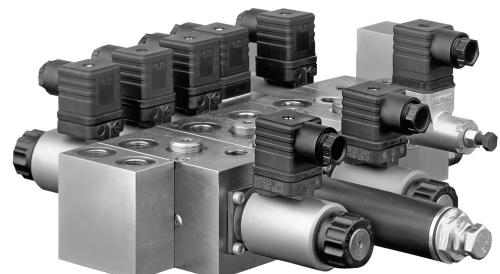

The valve bank can be flange-mounted directly on compact hydraulic power packs or integrated into a pipe system via a piping block.

### Features and advantages

- Flexible expandability
- Compact and lighter design (elimination of the base plates)

### Intended applications

- Auxiliary and clamping functions on machine tools and fixtures
- Auxiliary and clamping functions on forming machine tools

Valve bank type BVH

### ! NOTICE

- The availability of additional solenoid voltages and solenoid male connectors is based on the directional valves used.
- The solenoid voltages and solenoid male connectors are specified at the end of the order coding and are applicable to all the solenoids on the valve bank.
- The specifications regarding the IP protection class apply for versions featuring a properly assembled male connector.
- Pressure switches DG 3, DT 11, DG 1 are supplied as standard with a DIN connector; pressure switches DG 51, DG 6, DG 7 and DT 2 are supplied as standard with an M 12 connection.

### Connection pattern

G .., X .., L .., WG ..

M 24/8W

## 3 Parameters

### 3.1 General data

<b>Designation</b>	Valve bank type BVH
<b>Design</b>	Sectional design with banjo bolt connection
<b>Material</b>	Steel; zinc-nickel coated valve housing, hardened functional inner parts
<b>Installation position</b>	Any
<b>Attachment</b>	see Chapter 4, "Dimensions"
<b>Hydraulic fluid</b>	Hydraulic fluid, according to DIN 51 524 Parts 1 to 3; ISO VG 10 to 68 according to DIN ISO 3448 Viscosity range: 4 - 1500 mm <sup>2</sup> /s Optimal operating range: approx. 10 - 500 mm <sup>2</sup> /s Also suitable for biologically degradable hydraulic fluids type HEPG (polyalkylene glycol) and HEES (synthetic ester) at operating temperatures up to approx. +70°C.
<b>Cleanliness level</b>	<b>ISO 4406</b> 21/18/15...19/17/13
<b>Overlap</b>	Negative, transition from one flow direction to the other is completed only in the stroke end position. During switching, all passages are connected to each other.
<b>Temperatures</b>	Environment: approx. -40 to +80 °C, hydraulic fluid: -25 to +80 °C, pay attention to the viscosity range. Start temperature: down to -40 °C is permissible (take account of the start viscosities!), as long as the steady-state temperature is at least 20 K higher during subsequent operation. Biologically degradable hydraulic fluids: note manufacturer specifications. With consideration for the seal compatibility, not above +70°C.
<b>Flow direction</b>	Only in direction of arrow according to circuit symbol

### 3.2 Pressure and volumetric flow

<b>Operating pressure</b>	Connection P: p <sub>max</sub> = 400 bar Connection R: p <sub>max</sub> = 50 bar Connection A, B: p <sub>max</sub> according to the circuit symbol and actuation
<b>Flow rate</b>	Q <sub>max</sub> = 20 lpm

**! NOTICE**

Observe the specifications of the attached directional valves and upstream hydraulic power packs.

## Weight

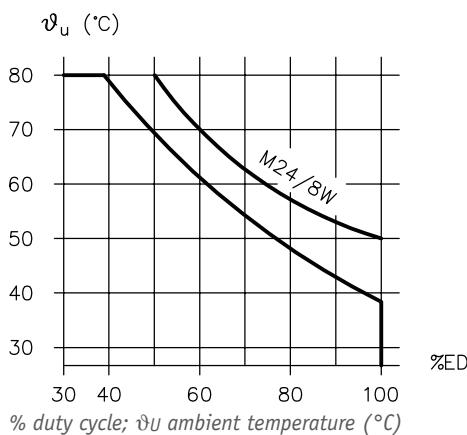

Type	
BVH 11 M(H)	= 1.5 kg
BVH 11 W	= 2.0 kg

## Manual override

To actuate the valve:

- Use a steel pin or screwdriver etc. to depress the brass bolt (visible on the upper face).

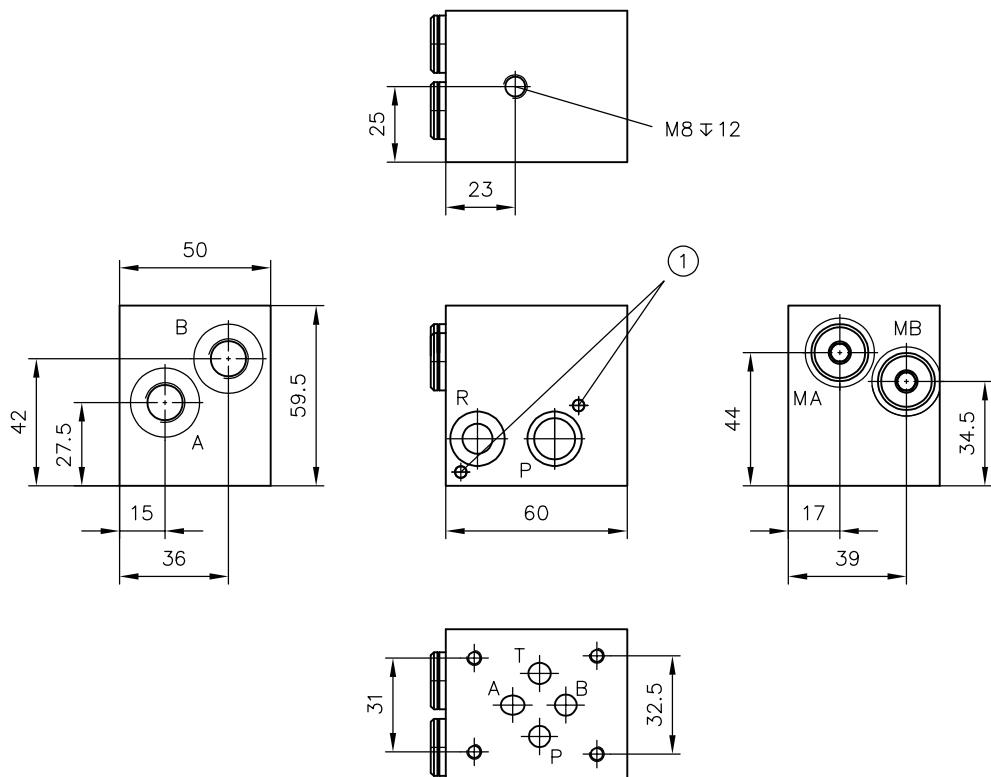

### ! NOTICE

Any pressure on port B produces a counterforce that acts on the brass bolt. This has a  $\varnothing 5$  mm, i.e. 100 bar  $\Delta 195$  N!

1 Auxiliary tool for actuation (do not use parts with sharp edges)

## Installation, operation and maintenance information

Observe the document B 5488 "General operating instructions for assembly, commissioning, and maintenance."

### 5.1 Intended use

This product is intended exclusively for hydraulic applications (fluid technology).

The user must observe the safety measures and warnings in this document.

**Essential requirements for the product to function correctly and safely:**

- All information in this documentation must be observed. This applies in particular to all safety measures and warnings.
- The product must only be assembled and put into operation by specialist personnel.
- The product must only be operated within the specified technical parameters described in detail in this document.
- All components must be suitable for the operating conditions when using an assembly.
- The operating instructions for the components, assemblies and the specific complete system must also always be observed.

**If the product can no longer be operated safely:**

1. Remove the product from operation and mark it accordingly.
  - ✓ It is then not permitted to continue using or operating the product.

### 5.2 Assembly information

The product must only be installed in the complete system with standard and compliant connection components (screw fittings, hoses, pipes, fixtures etc.).

The product must be shut down correctly prior to disassembly (in particular in combination with hydraulic accumulators).

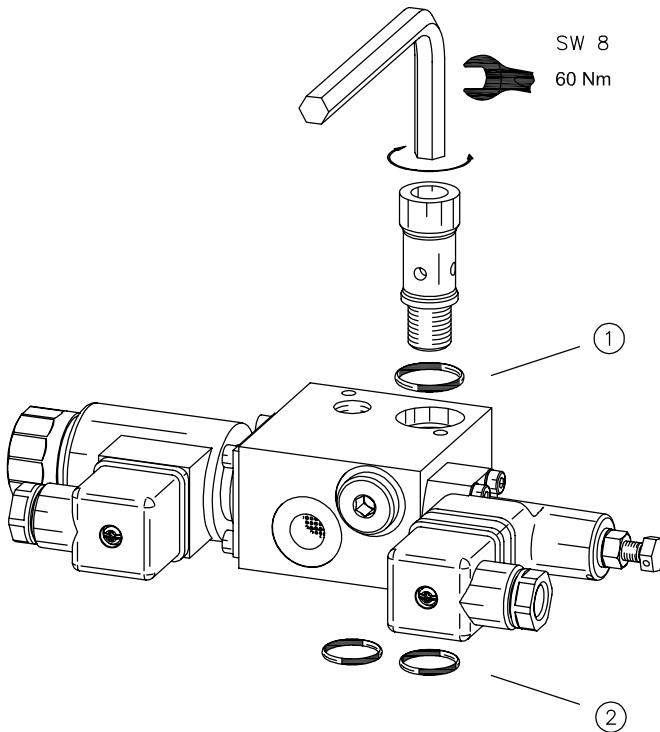

**DANGER**

**Sudden movement of the hydraulic drives when disassembled incorrectly**

Risk of serious injury or death

- Depressurise the hydraulic system.
- Perform safety measures in preparation for maintenance.

## Installation of the banjo bolt

1 0-ring 18.77x1.78 P 5001

2 0-ring 15.00x2.00 P 5001

## 5.3 Operating instructions

Observe product configuration and pressure/flow rate.

The statements and technical parameters in this document must be strictly observed.

The instructions for the complete technical system must also always be followed.

### **!** NOTICE

- Read the documentation carefully before usage.
- The documentation must be accessible to the operating and maintenance staff at all times.
- Keep documentation up to date after every addition or update.

### **!** CAUTION

#### Overloading components due to incorrect pressure settings.

Risk of minor injury.

- Pay attention to the maximum operating pressure of the pump, valves and fittings.
- Always monitor the pressure gauge when setting and changing the pressure.

## Purity and filtering of the hydraulic fluid

Fine contamination can significantly impair the function of the product. Contamination can cause irreparable damage.

### Examples of fine contamination include:

- Swarf
- Rubber particles from hoses and seals
- Dirt due to assembly and maintenance
- Mechanical debris
- Chemical ageing of the hydraulic fluid

**! NOTICE**

New hydraulic fluid from the manufacturer may not have the required purity.

Damage to the product is possible.

- ▶ Filter new hydraulic fluid to a high quality when filling.
- ▶ Do not mix hydraulic fluids. Always use hydraulic fluid that is from the same manufacturer, of the same type, and with the same viscosity properties.

For smooth operation, pay attention to the cleanliness level of the hydraulic fluid (cleanliness level see Chapter 3, "Parameters").

Additionally applicable document: [D 5488/1 Oil recommendations](#)

## 5.4 Maintenance information

Check regularly (at least once a year) by visual inspection whether the hydraulic connections are damaged. If external leakages are found, shut down and repair the system.

Clean the surface of the device regularly (at least once a year) (dust deposits and dirt).

### Control of the visual clogging indicator for pressure filter

A red piston becomes visible once the response pressure is reached. In this case, replace the pressure filter cartridge.

## 6 Other information

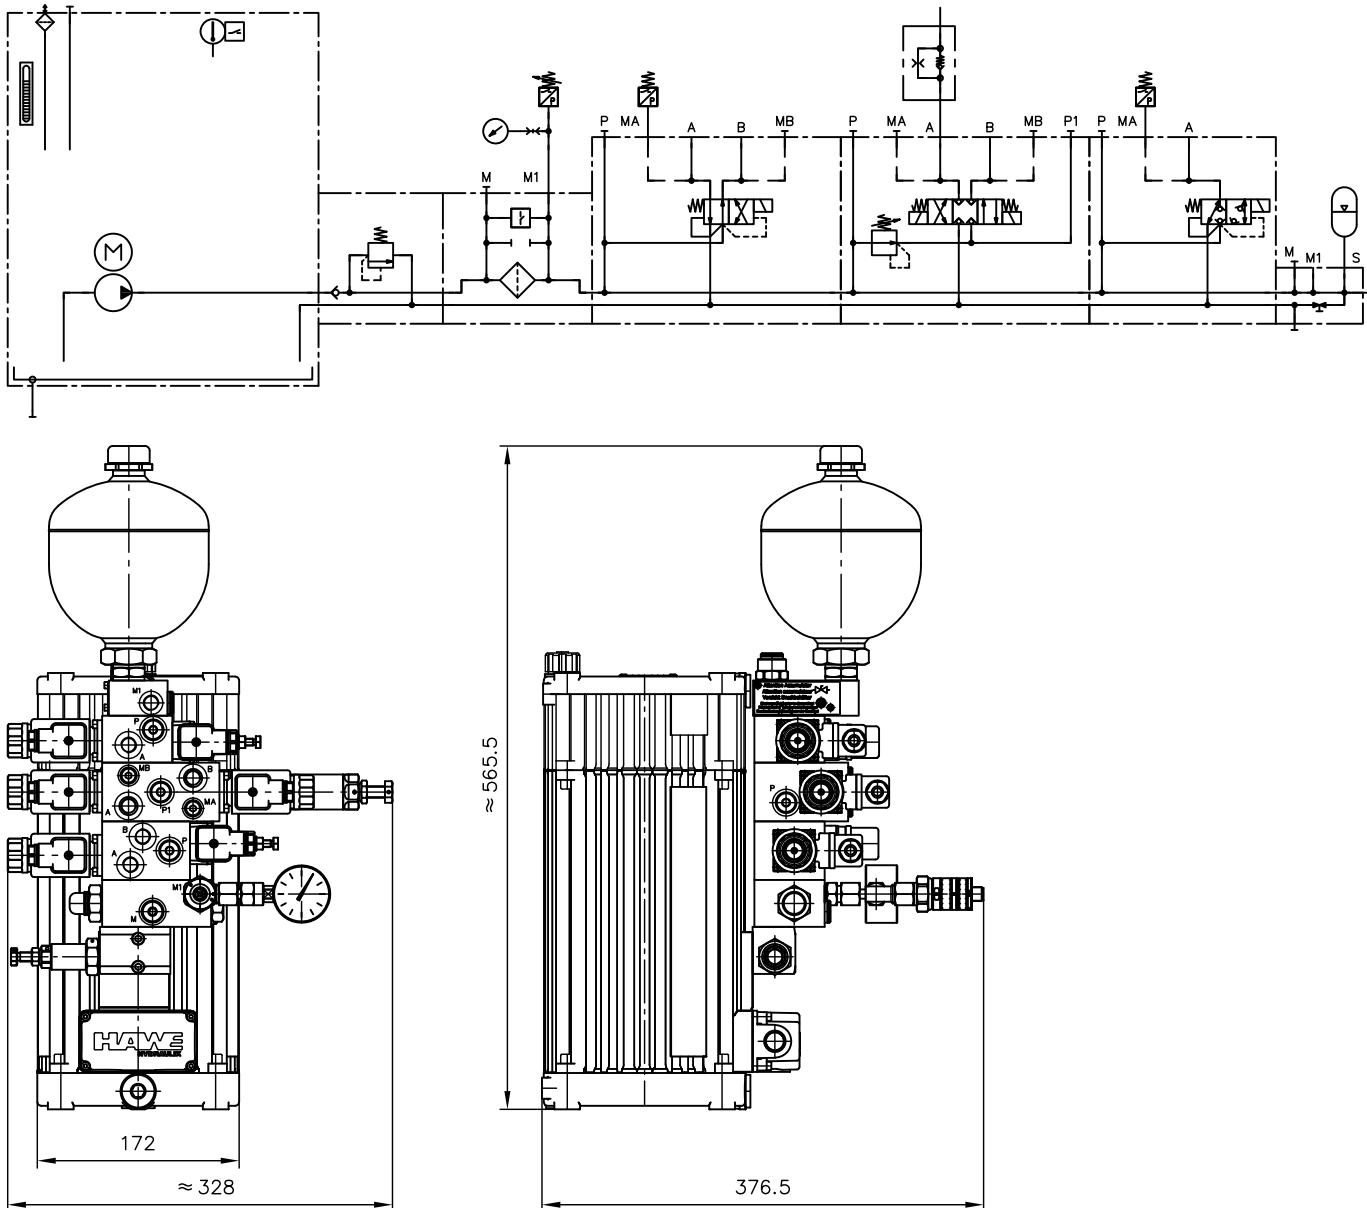

### 6.1 Circuit example

KA 281 SKT/Z 5.2

- AB 1 K PV X/ E 120
- BVH 11 ZD 10/SX/VV

- BVH 11 G/CZ 5/50/GM/0/BBR 1.0 E
- BVH 11 H/GM/0/5
- 81 - GM 24
- X 84 W-DG 62 R-9/160
- AC 1002/80/3 A3 x 400 V 50 Hz

Compact hydraulic power pack type KA  
motor power 1 kW

Connection block with return line filter and TÜV-approved safety valve set to 120 bar.  
Valve bank type BVH with three valve sections, two clamping functions with individually  
adjustable clamping pressure

## 6.2 Planning information

### **i INFORMATION**

When in combination with hydraulic accumulators, the permissible flow rate must be respected. An orifice may need to be incorporated between the accumulator and directional valves.

## 6.3 Accessories, spare and individual parts

To purchase spare parts, please see [HAWE Hydraulik interactive contact map](#).
